VERIDIUM Identity Assurance Platform

We deliver end-to-end **Identity Assurance** for a **Zero Trust world** in a way that respects **digital sovereignty**.

PREVENT ACCOUNT TAKEOVER WITH VERIDIUM'S IDENTITY ASSURANCE PLATFORM

Organizations trust Veridium to eliminate the risks associated with passwords and comply with GDPR, PSD2, and other government regulations. Veridium is deployed in highly regulated industries, including financial services, healthcare, and government services. With Veridium you can create a Zero Trust identity strategy that meets multi-factor authentication requirements and regulations.

USER EXPERIENCE WITH PASSWORDLESS MULTI FACTOR LOGIN

VeridiumID provides a secure and convenient multi-factor biometric authentication platform for employees, customers, and transactions. This independent authentication layer allows enterprises the freedom to customize the user experience -choosing the best biometrics for their needs -from native (fingerprint or face)- to Veridium's proprietary 4 Fingers TouchlessID, or other third-party biometrics.

R

Key Features & Benefits

- ZeroTrust based
- On-Prem, Hybrid & Cloud Solution
- Cyber resilience, fraud prevention, and threat detection through identities
- Seamless User Experience & easy adoption
- Wide Platform Compatibility
- Full Compliance and Regulations
- Seamless integration with SIEM tools, along with interfaces for third-party services

Your Identity Security - Reality Check

Scan the QR Code or <u>Click Here</u> to get a Six-Step Reality Check validating your Identity Security Posture.

In just 6 simple questions, you'll receive an initial evaluation of whether your current security measures are sufficient or if stronger authentication solutions might be necessary.

ABOUT Veridium is revolutionising user identity security. By reliably verifying user identities and devices, our Identity Assurance Platform—equipped with AI-based identity threat protection and continuous authentication capabilities—resolves a foundational security challenge that is critical to the effectiveness of nearly all other security controls related to user identity and access management: ensuring accurate user authentication, from start to finish.

Our Identity Assurance Platform seamlessly integrates with existing Identity/SSO providers to enhance authentication strength and with ZTNA, MDM, and EDR solutions.

It boasts the widest range of authenticators on the market, including passwordless, phishing-resistant options, FIDO tokens, and patent-protected biometrics (contactless fingerprints, face, and behavioural), and can enhance the security of traditional MFA solutions to improve the security posture of organisations regardless of where they sit along their IAM maturity journey.
